ColdWallet Token (CWT) Whitepaper

ColdWallet Token (CWT) is a fixed-supply ERC-20 token deployed on the Ethereum blockchain with a total supply of 1,000,000,000 tokens. The project powers the ColdWallet platform, an open-source, free, and anonymous financial dashboard that integrates seamlessly with existing financial services without holding user funds. The smart contract is deployed at: **0xa9995a928EbFa3030B86Ab62e85007e1AB7eb208**.

Key Features

1 Free and anonymous financial dashboard.
2 Frontend-as-a-Service (FaaS): all processes run locally on the user's device.
3 Local encryption ensures full data security and privacy.
4 Integration with MetaMask, Binance, OKX, Monobank, and all major exchanges via CCXT.
5 Ability to manually add assets in any currency.
6 Open-source and community-driven project.

Token Utility

CWT is a utility token designed to finance the ongoing development of ColdWallet and reward early adopters. It grants access to premium features, enables discounts for payments made in CWT, and powers advanced financial tools within the dashboard.

Roadmap

1 H1 2025: MVP launch at https://cold-wallet.app and Ethereum token deployment (see Etherscan: https://etherscan.io/token/0xa9995a928EbFa3030B86Ab62e85007e1AB7eb208).
2 H2 2025: Full redesign and integration with additional wallets.
3 H1 2026: Development of balance history tracking and premium features accessible via CWT.
4 H1 2026: AI-powered portfolio analysis with automated insights and recommendations.

Legal & Compliance

ColdWallet is an open-source, non-custodial, and utility-driven project. CWT is not a security; it is a utility token designed to power premium functionality. For legal policies, see:

- Terms of Use: https://cold-wallet.app/terms
- Privacy Policy: https://cold-wallet.app/privacy-policy
